Art Unit: 1618

Claims 1-7, 9-17 and 19 are presented for examination.

The remarks and declaration filed on October 5, 2005 have been received and entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 and 9-17 are rejected under 35 U.S.C. 102 (b) as being anticipated by Lindstrom et al. (U.S. Patent 4,725,586). Lindstrom et al. teach the use of the bicarbonate in combination with HEPES in an ophthalmic irrigating composition. See column 3, lines 27-38. The addition of the phrase “consisting essentially of” does not create a patentably distinct composition. Applicant has the burden of showing that introduction of the additional steps or components would materially change the nature of the invention.

Claims 19 is rejected under 35 U.S.C. 103 (a) as being unpatentable over Lindstrom et al. (U.S. Patent 4,725,586) and Lang et al. (U.S. Patent 5,403,841) for the reasons set forth on pages 2 and 3 of the office action of July 14, 2004.

Applicant's arguments and declaration have been carefully considered, but are not deemed to persuasive. Applicant alleges criticality to the ability of the claimed composition in being autoclaved. The allegation is not well taken. Applicant is reminded that claims 1-7 and 9-17 do not use autoclaving as a mean of sterilization. Furthermore, applicant has picked the components encompassed by the prior art, and alleging criticality to the advantages of such composition as an irrigating solution.

Art Unit: 1618

However, there is no evidence of record to demonstrate that a composition that is autoclaved is advantages in being a better irrigating solution over the prior art composition.
